

## Instructions to Setup RV Park on a New Computer (Moving the Database to the New PC)

- 1) Download and Install the **FULL** version on the New Computer. **NOTE: If you will be networking other computers to the RV Park program, you may want to install it in a Root directory like C:\RVPark, as opposed to the Program Files (x86) area.**
- 2) Then Copy the **Park.MDB**, **Map Images**, RVPicture.jpg (if you changed it for your Main Panel background), and (if you backed up any Park data) all of the Park\_**Day**.MDB type files to a CD from the "Old" computer. These files are all in your RVPark directory (or if you set a Database path to somewhere else, some of the files may be there). **NOTE: This is usually in the: C:\Program Files (x86)\RVPark directory.**
- 3) Put the CD with the files from your previous computer into the drive of the New Computer and copy them to the RVPark directory. Note: if you have specified a different Path for the database, you may need to reset this on the new computer. It should be right when first moving the files, but if you want them located in a different place, you may need to fix this later.

That should be it. If you have any problems, please contact us at 719-239-9768
